

HELROM

Trailer Rail

CO₂ SAVINGS CERTIFICATE

2022

The company

is improving its climate balance sheet
with a reduced carbon footprint in 2022.

With a reduction of

1.006,14 tons of CO₂ eq

as a result of
shifting its truck freight to rail.

In cooperation with the
Environment Agency Austria

umweltbundesamt[®]

GIRTEKA EUROPE WEST UAB

a Helrom GmbH partner on the way
to achieving net zero transport

This “well to wheel” calculation of the saved emissions on the Düsseldorf–Vienna–Düsseldorf route was carried out in cooperation with the Environment Agency Austria. It is based on the relevant norms (incl. EN 16258_2012) and contains the specific EURO 6 usage for the actual road route as well as the energy consumption for loading, shunting and rail transport on the rail network. The calculated CO₂ savings can be drawn upon for the greenhouse gas balance sheet under the Corporate Sustainability Reporting Directive (CSRD) or other reporting initiatives.

The mission of Helrom GmbH is a sustainable reduction in CO₂ emissions in freight transport to achieve European climate targets. We are delighted to be able to confirm the important contribution made to this by GIRTEKA EUROPE WEST UAB.
