

Girteka Logistics gets TAPA TSR & launches high-value cargo transportation services

Girteka Logistics was approved by the Transport Asset Protection Association (TAPA) to carry certified transport according to Trucking Security Requirements (TSR). TAPA TSR is inevitable for transportation of high-value cargos, as it defines security measures throughout the supply chain.

“Security is a paramount for high-value cargo transportation and that’s why we are proud of our TAPA TSR certification as this will enable us to further serve our high value clients around Europe with safe and secure transport services”, says Edvardas Liachovicus, CEO of Girteka Logistics.

Girteka Logistics TAPA TSR certification included an audit of security elements across company’s business operations. TAPA TSR requirements apply for management support and responsibilities, as well as staff inspection protocols and drivers security trainings. Inevitable part of this certification is also a physical cargo security, use of tracking technologies, freight handover process, and more.

“Being a TAPA TSR certified provider means that we have dedicated transport managers with TAPA TSR experience and knowledge, and that our trucks are equipped with additional security features such as high security locks, seals, tracking devices and many more”, says Mr. Liachovicus.

The TAPA Trucking Security Requirements specify the minimum acceptable standards for security throughout supply chains utilizing trucking and associated operations, including the methods to be used in maintaining those standards.

Girteka Logistics is a major European road carrier with more than 7,100 employees in Europe, Scandinavia and the CIS region. Fleet consists of 2,900 trucks and 3,100 trailers. Company customers range from local producers to big international companies with major regional distribution centres.
